What Is An XML Web Sitemap And Why Should I Have One On My Website?

An XML web sitemap is an index that contains every single web page on your website. There are two kinds of sitemaps that you can use. One type of web sitemap helps your site visitors find their way around your site, and the other type is an XML file that helps Google and other search engines crawl and find pages on your website more easily.

In this article, we'll take a look at XML sitemaps; sitemaps that help search engine spiders find and crawl your web pages.
