Do You Understand Web Hosting

The internet, or world wide web, is a collection of internet sites hosted by organizations or individual 'web hosting' services, on computers (or web servers) all across the globe.

The 'web server', where all a websites main files, which include graphic files and html files are stored is commonly known as the 'web host'.

Basically, 'web hosting' is where a websites source files are uploaded to a 'web server' maintained by a Internet Service Provider(ISP) and can be seen by anyone. These source files, saved on the server will also need to be maintained.

It is very important remember, when choosing a 'web hosting company', that they are flexible and you can make changes to your site, either to content or description, at no high extra costs. This means you will have the administration rights to your site and be in full control of it.

User friendly offers are now available from [PHP Hosting](#) companies allowing even those with little web skills to fully maintain their own site. A lot of companies now even offer full training packages as well as other free services which will enable you to manipulate your website to the way you would like it.

An additional very important aspect when deciding on a 'web hosting company' is security. Any reputable company will be able to offer 24/7 support, either online or through toll free telephone numbers and also monitor your internet site continuously for any unwanted intruders.

Being contactable all the time, to help with any problems you may be having with your site, is imperative and all reputable companies should, at the very least, have on-line support.

The cost of 'web hosting' has decreased substantially over recent years, mainly due to the many [Website Hosting](#) companies competing for your custom, so take advantage of free offers and free on-line training packages and you soon could see your website listed amidst competitors.
